

Frontier Ship 2.0 Shipping Software, Made Simple

Frontier Ship 2.0 presents a seamless, simple to use shipping application for all of your parcel and LTL freight.

Feature List Includes:

Best Method Intelligence:

Frontier Ship 2.0 will automatically find the best shipping method and rate for each order, so you can feel confident that you're using the delivery services most efficient for your goods.

Simple Scan Labeling System:

Frontier ship 2.0 allows you to automatically bar-coded labels that make it easy to track your freight through Frontiers network

Product Information Recording:

Record all of your products and information so that they can be quickly and easily entered into shipments without having to repeatedly enter dimensions, weights, and descriptions.

Consignee Database Storage:

Store all of your customers address information so that it can be quickly and easily added to your orders.

Configurable Imports:

Frontier Ship 2.0 can be configured to atomically or manually import your customers, products, and even complete order information.

Easy To Use Exports:

Your shipping Manifest data can be easily exported from Frontier Ship 2.0 to be loaded into your own auditing and order management systems.

Comprehensive Error Reporting:

All imports are screened for errors and bugs at the time of processing. Before importing, Frontier Ship2.0 will produce a comprehensive error log of your orders for easy and accurate debugging.

A Streamlined Solution

By combing customer and product databases with our comprehensive import functions, Frontier Ship 2.0 allows shippers to quickly and efficiently generate orders and labels, as well as submit your tracking information directly to Frontier. Orders are easily traceable within minutes of being submitted to Frontier, providing you with a faster, simpler shipping process and improving transparency for your clients.
